SKYFORM-SGL

Product Ecosystem Control:

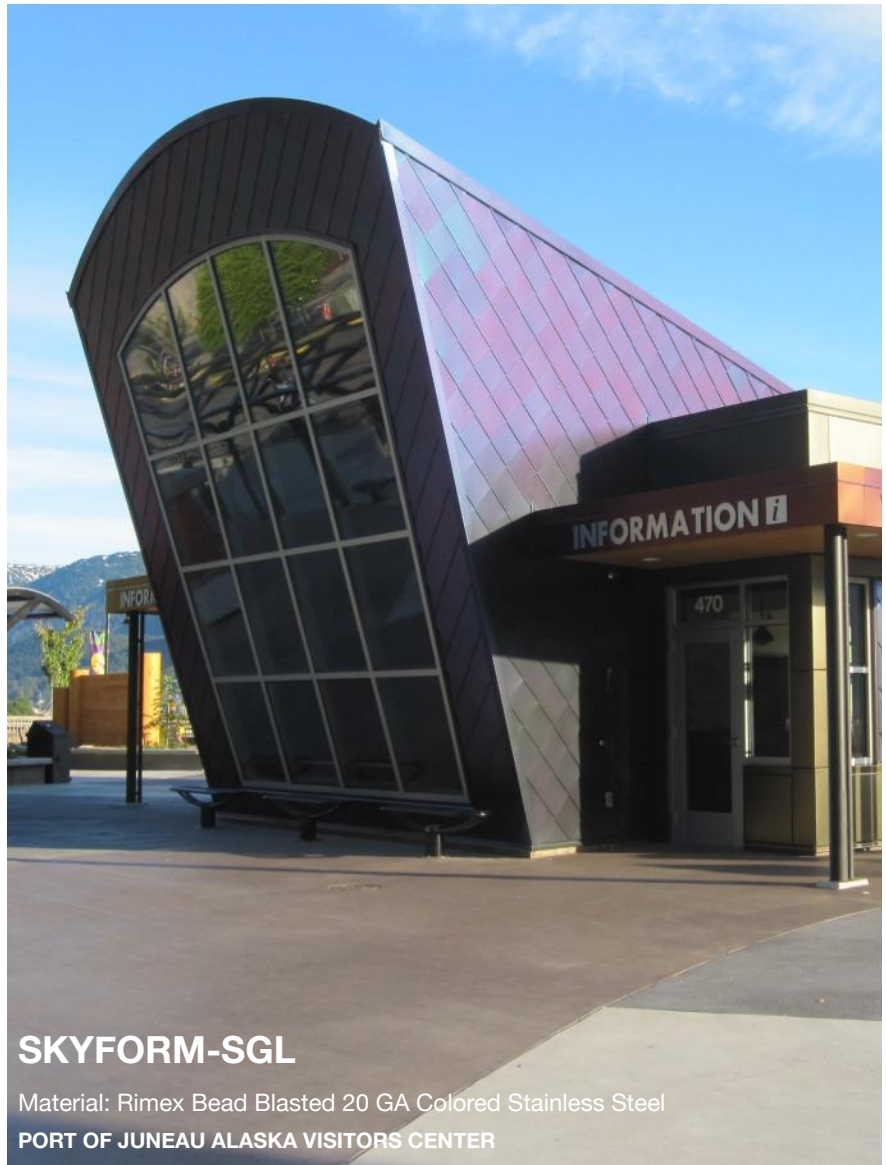

Skyline Sheet Metal has complete control of the design, fabrication, shipping and installation of our Skyform-SGL. With this level of control we are able to react to construction tolerances and project schedules with a level of efficiency that is just not possible when relying on a third party fabricator.

Benefit:

Skyline's unique control of the products ecosystem provides a level of service and quality that is hard to reproduce with a third party Shingle supplier in conjunction with a contract installer.

Signature of Design:

We at Skyline like to think of Skyform as an Architects blank slate. We encourage Architects and Designers to limit the design only by their imagination. If we can form it with our equipment, then you can specify it. We don't stop there. Skyline will work with Architects to assure design will meet local code jurisdictions, we will engineer, and if needed, perform structural and water penetration testing. After this comprehensive process is complete, your project will have a custom cladding solution with your individual signature of design.

SKYFORM-SGL

Material: Rimex Bead Blasted 20 GA Colored Stainless Steel

PORT OF JUNEAU ALASKA VISITORS CENTER

SKYFORM-SGL

Material: 20 OZ Pre-Patina Copper

CHEMEKETA COMMUNITY COLLEGE YAMHILL CAMPUS

SKYFORM-SGL

Material: Rimex Bead Blasted 20 GA Colored Stainless Steel
PORT OF JUNEAU CUSTOMS BUILDING

List of Features:

Tested System ASTM E 330.
